## Tummy Tuck (Abdominoplasty)

# Tummy Tuck (Abdominoplasty)

## What exactly is an abdominoplasty?

Women who are bothered by abdominal laxity and excess skin as a result of weight fluctuations and/or pregnancy may be candidates for abdominoplasty. Abdominoplasty, also known as a “tummy tuck,” is the surgical removal of excess skin and abdominal wall fat. To flatten and firm the abdomen, the abdominal fascia (the “girdle”) is typically tightened. This type of abdominoplasty is easily performed in conjunction with other gynecologic surgery or as a standalone procedure.

The procedure is ideal for people who want to:

You may have excess fat, poor skin elasticity, or weakened connective tissue in your abdomen for a variety of reasons. These are some examples:

- Weight gain or loss
- Pregnancy
- Abdominal surgery, such as a C-section
- Aging
- Your natural body type

A tummy tuck can remove excess skin and fat as well as tighten weak fascia. Stretch marks and excess skin in the lower abdomen below the belly button may also be removed with a tummy tuck. A tummy tuck, on the other hand, will not correct stretch marks outside of this area.

If you've had a C-section before, your plastic surgeon may be able to incorporate your previous C-section scar into your tummy tuck scar.

A tummy tuck can also be combined with other body contouring cosmetic procedures, such as breast augmentation.

In general, you may be a good tummy tuck candidate if:

- You are physically healthy and at a stable weight
- You have realistic expectations
- You are a nonsmoker
- You are bothered by the appearance of your abdomen

## BEFORE & AFTER

## TESTIMONIALS

I went to Lelux Hospital to have my tummy tuck performed. I'm overjoyed with the results; my stomach is more than I could have imagined! My scar is so neat and tidy that I love my belly button, and the surgeon has done my waist. I have an hourglass figure and feel fantastic. Thank you very much!!!
