BREAST LIFT

A mastopexy, or breast lift, raises the breasts by removing excess skin and tightening the surrounding tissue to reshape and support the new breast contour.

According to new data from the American Society of Plastic Surgeons, breast lifts have increased by 70% since 2000, outpacing breast implants by a factor of two.

The areola can enlarge over time, and a breast lift can help to reduce this.

A breast lift can revitalize your figure by creating a more youthful and uplifted breast profile. Over time, a woman's breasts lose their youthful shape and firmness. These changes and loss of skin elasticity can occur as a result of:

Pregnancy

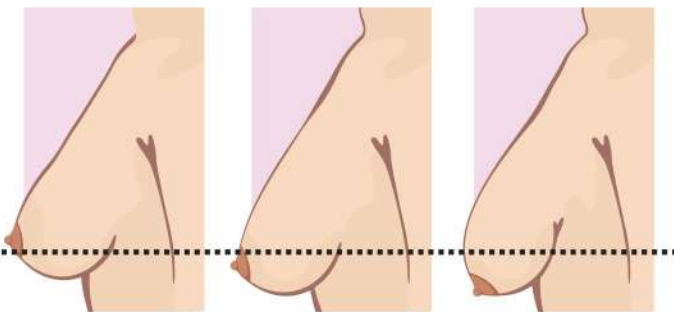

Breastfeeding

Variations in weight

Aging

Gravity

Heredity

What breast lift surgery cannot achieve

Breast lift surgery does not significantly change the size of your breasts or round out the upper part of your breast. Consider breast lift and breast augmentation surgery if you want your breasts to appear fuller.

Consider combining breast lift and breast reduction surgery if you want smaller breasts.

What makes someone a good candidate for breast augmentation?

If you meet the following criteria, you may be a candidate for breast lift surgery:

- You are physically fit and your weight is stable.
- You do not smoke.
- You have the uneasy feeling that your breasts have sagged or lost shape and volume.
- Your breasts are elongated, flatter, or pendulous.
- When unsupported, your nipples fall below the breast crease
- Your areolas and nipples are pointing downward.
- Your skin has stretched and your areolas have grown in size.
- One of the breasts is lower than the other.

BEFORE & AFTER

TESTIMONIALS

Don't Hesitate..Lelux Hospital Changed My Life!

After experiencing very saggy breasts and large areolas as a result of weight loss, I underwent a breast lift without implants. They have been very attentive and professional with every aspect of surgery since the first inquiry about breast lift surgery until the last post-op visit. I had no trouble scheduling surgery and even had a date set within three weeks of my consultation.

I knew I wanted to have my breasts lifted at Lelux Hospital from the first consultation.

The surgeon, Dr. Panob, is excellent at explaining every detail of surgery and is the type of surgeon who takes the time to thoroughly answer all of your questions.

He is also someone who will ask about your expectations, consider all possible outcomes of surgery, and be honest about what he can and cannot do. He even calls the night after your surgery to check on you. I believe Dr. Panob is one of the few surgeons who is as excited to see your results as you are and celebrates your progress with each post-op visit. My breasts look fantastic, and I will be eternally grateful to Dr. Panob and Lelux Hospital staff. You will not be sorry that you chose him as your surgeon.
