RHINOPLASTY

What is Open Rhinoplasty?

Open rhinoplasty, also known as external rhinoplasty, is a procedure that involves making a small incision in the columella, the soft tissue that separates the nostrils (photo below).

This technique allows easy access to the underlying bone and cartilage structures while under general anesthesia.

An open rhinoplasty will be recommended in cases where easier access to the surgery site and increased visibility of the area to be treated are required.

What makes someone a good candidate for Open Rhinoplasty?

- A nose that is large or wide
- A bump on the nose's bridge
- A drooping nose tip
- A fractured nose
- A deviated septum

TESTIMONIAL

“The surgeon's work is of the utmost quality. The surgeon is courteous, professional, attentive, and thorough. The staff is not only attractive but also attentive, with a friendly, professional persona. The hospital is stunning. All of this, however, would be meaningless if the doctor in question was not a skilled, well-trained, meticulous surgeon with an artist's eye and as skilled hand.

He works to make a difference with a natural finish. I underwent an open-rhinoplasty.”

OPEN RHINOPLASTY

“The entire process was so simple, and the results are fantastic.”
