FACE SURGERY (V-LINE)

What is V-Line Surgery?

V-line surgery reshapes the jawline from just under your ears to the tip of your chin, transforming it from a “U.” shape to a more streamlined, feminine “V.” When combined with a sliding genioplasty, which moves the chin forward or back, it can dramatically alter the lower face.

Asian V-Line jaw surgery, V-shaped face surgery, jaw reduction surgery, square jaw surgery, or a mandibuloplasty are all names for the procedure.

In some cultures, a V-shaped jaw and chin are associated with femininity and female beauty. People who are interested in this procedure are typically those who identify as female or nonbinary and desire a more "feminine" jaw and chin shape.

The procedure is ideal for people who want to:

- Reduce the width and length of a wide jaw.
- Reduce a masculine thick chin and replace it with a more feminine curve to create an oval “V” shaped face.
- Remove a double or extra chin.
- To make it more sleek and elegant, reduce the size and position of the jaw.

What makes someone a good candidate for V-Line?

You should be in good overall health and have realistic expectations of what v-line can do.

TESTIMONIALS

Hello there, everyone! It's been a while, and my life has changed signi cantly! I've met so many new people, and my self-esteem has grown. I believe it makes it easier for me to communicate with others. I can't express how grateful I am or how happy it made me. Without a doubt, I am pleased with my results and hope you are as well!
